

STORING & CLEANING VUSAFE PANELS

Storage:

Store VuSafe panels securely, in a dry area, free of dust and chemicals and out of direct sunlight. Panel attachment hardware should be stored with the panels along with any instructions, which may aid in the deployment of the system under emergency conditions.

Cleaning:

VuSafe Panels are made of polycarbonate. Rinse both sides of panels with clean warm water and wipe with a soft cloth. We recommend you don't use any other cleaning product on the panels as it will cause them to fog or discolor. After cleaning with water, allow the panels to air dry before storing away.

Follow these simple guidelines:

Do not use abrasives, scrapers, razors or squeegees.

Do not clean with gasoline.
